Student Name: Aishwary Singh UID: 23BCS11568

Branch: B.E./C.S.E. Section/Group: KRG3\_B

Semester: 5th

**Subject Name: ADBMS Subject Code: 23CSP-333** 

### **Medium Level Problem**

**Question**: Normal View vs. Materialized View

1. Create a large dataset:

- Create a table names transaction data (id, value) with 1 million records.
- take id 1 and 2, and for each id, generate 1 million records in value column
- Use Generate series () and random() to populate the data.
- 2. Create a normal view and materialized view to for sales\_summary, which includes total quantity sold, total sales, and total orders with aggregation
- 3. Compare the performance and execution time of both.

#### **Solution:**

```
CREATE TABLE transaction_data (
   id INT,
   value NUMERIC
);
```

### Insert 1 million records for id = 1

INSERT INTO transaction\_data (id, value) SELECT 1, (random() \* 100)::numeric FROM generate\_series(1, 1000000);

### Insert 1 million records for id = 2

INSERT INTO transaction data (id, value)

SELECT 2, (random() \* 100)::numeric FROM generate series(1, 1000000);

# WITH NORMAL VIEW

CREATE OR REPLACE VIEW sales\_summary\_view AS SELECT
id,
COUNT(\*) AS total\_orders,
SUM(value) AS total\_sales,
AVG(value) AS avg\_transaction
FROM transaction\_data
GROUP BY id;

## **EXPLAIN ANALYZE**

SELECT \* FROM sales summary view;

	QUERY PLAN text
1	Finalize GroupAggregate (cost=25226.2925279.46 rows=200 width=76) (actual time=364.318375.012 rows=2 loops=1)
2	Group Key: transaction_data.id
3	-> Gather Merge (cost=25226.2925272.96 rows=400 width=44) (actual time=364.304374.995 rows=6 loops=1)
4	Workers Planned: 2
5	Workers Launched: 2
6	-> Sort (cost=24226.2624226.76 rows=200 width=44) (actual time=289.350289.351 rows=2 loops=3)
7	Sort Key: transaction_data.id
8	Sort Method: quicksort Memory: 25kB
9	Worker 0: Sort Method: quicksort Memory: 25kB
10	Worker 1: Sort Method: quicksort Memory: 25kB
11	-> Partial HashAggregate (cost=24216.1224218.62 rows=200 width=44) (actual time=289.302289.304 rows=2 loops=3)
12	Group Key: transaction_data.id
13	Batches: 1 Memory Usage: 40kB
14	Worker 0: Batches: 1 Memory Usage: 40kB
15	Worker 1: Batches: 1 Memory Usage: 40kB
16	-> Parallel Seq Scan on transaction_data (cost=0.0019226.21 rows=665321 width=36) (actual time=0.02380.878 rows=66
17	Planning Time: 0.276 ms
18	Execution Time: 375.102 ms

#### WITH MATERIALIZED VIEW

CREATE MATERIALIZED VIEW sales\_summary\_mv AS SELECT
id,
COUNT(\*) AS total\_orders,
SUM(value) AS total\_sales,
AVG(value) AS avg\_transaction
FROM transaction\_data
GROUP BY id;

#### **EXPLAIN ANALYZE**

SELECT \* FROM sales summary mv;

	QUERY PLAN text
1	Seq Scan on sales_summary_mv (cost=0.0017.80 rows=780 width=76) (actual time=0.0140.016 rows=2 loops=
2	Planning Time: 0.858 ms
3	Execution Time: 0.031 ms

## **Hard Level Problem**

Question: Securing Data Access with Views and Role-Based Permissions

The company TechMart Solutions stores all sales transactions in a central database. A new reporting team has been formed to analyze sales but they should not have direct access to the base tables for security reasons.

The database administrator has decided to:

- 1. Create restricted views to display only summarized, non-sensitive data.
- 2. Assign access to these views to specific users using DCL commands (GRANT, REVOKE).

# **Solution:**

```
CREATE VIEW vW ORDER SUMMARY AS
SELECT
 O.order id,
 O.order date,
 P.product name,
 C.full name,
 (P.unit price * O.quantity) - ((P.unit price * O.quantity) * O.discount percent / 100)
AS final cost
FROM customer master AS C
JOIN sales orders AS O
 ON O.customer id = C.customer id
JOIN product catalog AS P
 ON P.product id = O.product id;
SELECT * FROM vW ORDER SUMMARY;
CREATE ROLE CLIENT USER
LOGIN
PASSWORD 'client password';
GRANT SELECT ON VW ORDER SUMMARY TO CLIENT USER;
REVOKE SELECT ON vW ORDER SUMMARY FROM CLIENT USER;
```
